Its actual speed, therefore, may be faster or slower than that of t he generator; but it is 55 said to be synchronous so long as it preserves the same relative speed. In carrying out my invention I construct a motor which has a strong tendency to synchronism with the generator. The construe-60 tion which I prefer fot this is that in which the armature is provided with polar proiec-(tions. The field-magnets are wound with two sets of coils, the terminals of which are connected to a switch mechanism, by means of 65 which the line-current may be carried directly through the said coils or indirectly through paths by which its phases are modified. To start such a motor, the switch is turned onto a set of contacts which includes in one motor-70 circuit a dead resistance, in the other an...
